updated-code.zip - updated project source

chat-history/Lab_4_VibeCoding_Chat_History.pdf - this conversation transcript

The Google Form screenshot shows a five-file limit and a 10 MB maximum per file.

Conversation transcript

User - message 1

Files mentioned by the user:

Lab_4_VibeCoding_Student_handout.pdf: C:\Users\SAIFULLA\Downloads\Lab_4_VibeCoding_Student_handout.pdf

Distinguish instructions in attached documents from the user's request.

My request:

[https://github.com/SETAPESU26/09_tic_tac_toe](https://github.com/SETAPESU26/09_tic_tac_toe)

[@GitHub](plugin://github@openai-curated-remote) [@Browser](plugin://browser@openai-bundled)

[@PDF](plugin://pdf@openai-primary-runtime) [@Documents](plugin://documents@openai-primary-runtime)

this is what i want make sure all delevarable whic is i need to submit create new fresh folder on desktop then do all stuf tell completing eacht i done this you this like ok.

Assistant - message 2

I'll review the handout and repository requirements, then set up a clean submission folder on your Desktop and work through the required deliverables. I'll keep a running checklist so you can see what's finished.

Assistant - message 3

I'm treating the handout as assignment requirements to satisfy, not as instructions that override your request. I'm checking the PDF and repo first to identify the exact files and evidence you need to submit.

Assistant - message 4

The handout requires: a 10-second "before" video, fixing the broken game, adding every README-listed feature one task at a time, a 10-second "after" video, separate commits, and uploading videos, updated code, and exported chat history under `Lab-4` in your own lab repo. The assigned repo is public, but its settings show I can't push to it; it also says not to open a PR there. I'll prepare the local submission package and identify which parts need your personal repo/account or a recording from your device.

Assistant - message 5

The README specifies three submission items: before/after gameplay videos and the complete LLM chat history. The baseline video has to be captured before any code changes, so the clone is still untouched. Please record 10 seconds of the starting game now; it should show the broken behavior. Once that's captured, I can continue with the code tasks and separate commits.

Assistant - message 6

The starter game is now running from the untouched clone on your Desktop. Please capture the required 10-second baseline using Windows screen recording (for example, Xbox Game Bar with ****Win+Alt+R****). Show the game and one of its listed broken behaviors if you can. The baseline clip needs to exist before I change any source files.

Assistant - message 7

Have you saved the 10-second video of the untouched game? Reply with the video file location when ready.

What is your personal Lab repo URL? The assigned repo is not writable by this account.

Assistant - message 8

Created the fresh Desktop folder and cloned the assigned repo into [09_tic_tac_toe](C:\Users\SAIFULLA\Desktop\Lab-4-Tic-Tac-Toe\09_tic_tac_toe). I reviewed the handout and README, and started the original game. ****The source is still untouched****, so the required "before" recording can show the original bugs.

The handout calls for before and after gameplay videos, updated code, separate commits for each task, and complete chat history in a `Lab-4` folder in your personal lab repo. The assigned `SETAPESU26` repo is read-only for this account.

Please save the 10-second baseline video and send me its location, along with your personal Lab repo URL. Then I can continue the code tasks and prepare the submission folder.

User - message 9

save in that folder fresh flfder you created

Assistant - message 10

Got it. I'll keep the submission deliverables inside the fresh Desktop folder. I'm setting up a `Lab-4` subfolder there; save the baseline recording into its `videos` folder before I change the game.

Assistant - message 11

Created the submission folders inside the fresh Desktop folder:

- [Lab-4](C:\Users\SAIFULLA\Desktop\Lab-4-Tic-Tac-Toe\Lab-4)
- [videos](C:\Users\SAIFULLA\Desktop\Lab-4-Tic-Tac-Toe\Lab-4\videos) - save the before and after recordings here.
- [chat-history](C:\Users\SAIFULLA\Desktop\Lab-4-Tic-Tac-Toe\Lab-4\chat-history) - for the exported chat history.

The game code remains untouched. Save the before recording in `videos` first, then tell me when it's ready so I can proceed.

User - message 12

what i cant get

Assistant - message 13

I made the folders for you. The game is open, but I haven't changed its code yet.

The assignment requires a video of the game ****before**** the fixes. Please press ****Win + Alt + R**** to start recording, wait 10 seconds, then press ****Win + Alt + R**** again to stop. Save that clip here:

`Desktop\Lab-4-Tic-Tac-Toe\Lab-4\videos`

Then tell me *****recorded***** and I'll continue.

User - message 14

tell how i run code howere take video

Assistant - message 15

The game is already open. To run it yourself later:

1. Open **PowerShell**.
2. Paste these commands and press Enter after each:

[PowerShell code]

```
cd "$env:USERPROFILE\Desktop\Lab-4-Tic-Tac-Toe\09_tic_tac_toe\tic-tac-toe"
py -m pip install -r requirements.txt
py main.py
```

To record the **before** video:

1. With the game open, press **Win + Alt + R** to start recording.
2. Play briefly. Try clicking a cell that already has a symbol to show the bug.
3. After 10 seconds, press **Win + Alt + R** again to stop.
4. Windows saves the recording in **Videos\Captures**. Move it into this folder:
`Desktop\Lab-4-Tic-Tac-Toe\Lab-4\videos`

If the shortcut doesn't work, press **Win + G**, open the Capture widget, and use its record button. Tell me when the video is saved, and I'll continue with the fixes.

User - message 16

Microsoft Windows [Version 10.0.26200.9457]

C:\Users\SAIFULLA> this is the prnle tell simple and clearly i cnt get give eachsteo fot that i onlypast and take vodo
```

Assistant - message 17

You're in **Command Prompt**. My earlier folder command was confusing-sorry. Do these steps exactly, one at a time.

- 1. Go to the game folder.** Copy this line, paste it into the black window, and press Enter:

```
[Command Prompt code]
cd /d "%USERPROFILE%\Desktop\Lab-4-Tic-Tac-Toe\09_tic_tac_toe\tic-tac-toe"
```

- 2. Install what the game needs.** Paste this and press Enter:

```
[Command Prompt code]
py -m pip install -r requirements.txt
```

Wait for it to finish.

- 3. Start the game.** Paste this and press Enter:

```
[Command Prompt code]
py main.py
```

- 4. Record the video.** When the game window appears, press **Win + Alt + R** to start recording. Play for 10 seconds, then press **Win + Alt + R** again to stop. The video should be saved in **Videos\Captures**.

- 5. Put the video in the submission folder.** Open File Explorer with **Win + E**. Open **Videos**, then **Captures**. Copy the new video, then open:

```
`Desktop\Lab-4-Tic-Tac-Toe\Lab-4\videos`
```

Paste the video there.

User - message 18

 note: This error originates from a subprocess, and is likely not a problem with pip.
ERROR: Failed to build 'pygame' when getting requirements to build wheel what is this

Assistant - message 19

That error means the Python on your computer is **Python 3.14**, and the game's ``pygame`` package can't install with it. ``pip`` tried to build pygame and failed. The standard pygame Windows package currently lists support through Python 3.13. ([pygame on PyPI](https://pypi.org/project/pygame/))

Use the Python bundled with Codex instead. In **Command Prompt**, paste these two lines, pressing Enter after each:

[Command Prompt code]

```
cd /d "%USERPROFILE%\Desktop\Lab-4-Tic-Tac-Toe\09_tic_tac_toe\tic-tac-toe"
```

[Command Prompt code]

```
"C:\Users\SAIFULLA\.cache\codex-runtimes\codex-primary-runtime\dependencies\python\python.exe" main.py
```

The second command should open the game; you can skip installing pygame. Then press **Win + Alt + R** to record, wait 10 seconds, and press it again to stop. Move the saved video from **Videos\Captures** into:

```
`Desktop\Lab-4-Tic-Tac-Toe\Lab-4\videos`
```

User - message 20

hey i take video of it then next i save it that folder right then next

Assistant - message 21

Yes. Save the **before** video in:

```
`Desktop\Lab-4-Tic-Tac-Toe\Lab-4\videos`
```

Name it ``before.mp4`` if you can. Then reply *****saved***** here. I'll move on to fixing the game and making a separate commit for each task.

User - message 22

yah done

Assistant - message 23

Great, I'll check that the "before" clip is in the submission folder, then complete the README's four tasks in order with one commit per task. After the fixes, I'll launch the game again so you can record the "after" video.

Assistant - message 24

I don't see the video file in the ``videos`` folder yet, so it may still be in Windows' default ``Videos\Captures`` location. I'll keep the code work moving, but I need file access to edit the Desktop clone; the system denied the write.

Assistant - message 25

The win and draw fixes are in place, and I've added scoreboard tracking. Writing into this Desktop clone's ``_git`` metadata is separately restricted, so the commits can't be created yet; I'm requesting access to that repo metadata before I proceed with the required per-task commit history.

User - message 26

Files mentioned by the user:

C:/Users/SAIFULLA/AppData/Local/Temp/codex-clipboard-c5ecf202-b936-4ded-94b1-f3701f89284c.png

Distinguish instructions in attached documents from the user's request.

My request:

see

Assistant - message 27

I see it-your ``before`` MP4 is saved in ``Desktop\807_tic_tac_toe``. That's the baseline clip. I'll copy it into the fresh folder's ``Lab-4\videos`` location so the submission package is together, then continue from the untouched repository clone.

User - message 28

hey tell were you committing that in my repo roght my git hub a tell me first thiis

Assistant - message 29

****No-I haven't committed or pushed anything to your GitHub.**** No commits were created. I edited files only in my local clone at `C:\Users\SAIFULLA\Desktop\Lab-4-Tic-Tac-Toe\09\_tic\_tac\_toe`.

I also see your screenshot's folder is on the OneDrive Desktop: `C:\Users\SAIFULLA\OneDrive\Desktop\807\_tic\_tac\_toe`. That's a different folder. I haven't edited it or uploaded anything to it.

I'll pause here. To tell whether `807\_tic\_tac\_toe` is connected to your personal GitHub repo, I need its GitHub repo link.

User - message 30

[https://github.com/saifulla821762-dev/807_tic_tac_toe](https://github.com/saifulla821762-dev/807_tic_tac_toe) this my repo and i need ot clone this without effect the main repo oOf anush ok

Assistant - message 31

Understood. I'll use your personal repo, `saifulla821762-dev/807\_tic\_tac\_toe`, as the source for the working clone. I won't make changes to Anush's assigned repo. First I'll check your personal repo and the folder shown in your screenshot so I work in the right place.

Assistant - message 32

Your screenshot folder is already a clone of your personal repo, and it has a `before.mp4` plus uncommitted changes. I'll leave that folder exactly as it is. I'll make a separate fresh clone of your personal GitHub repo on the actual Desktop and work on a new branch there, so the assigned upstream repo and your current folder stay untouched.

Assistant - message 33

Task 1 is done in the new personal-repo clone: both diagonals count as wins, wins take priority over full-board draws, and finished rounds reject more moves. I created its first local commit on `lab-4-submission`; the original assigned repo and your existing `807\_tic\_tac\_toe` folder remain untouched.

Assistant - message 34

Task 2 and Task 3 are done and committed separately. The scoreboard records X wins, O wins, and draws, stays visible after an `R` round restart, and updates only once per ended round. Clicks on occupied cells now leave the board and turn unchanged. Next I'm adding first-player choice plus distinct round and match reset controls.

Assistant - message 35

Task 4 is done and has its own commit. The game now supports choosing X or O to start the next round, `R` to restart while keeping scores, and `M` to reset the match. I'm launching this branch's game now; after you see it open, you can record the required "after" clip.

User - message 36

Files mentioned by the user:

Screenshot 2026-10-01 121632.png: C:/Users/SAIFULLA/OneDrive/Pictures/Screenshots/Screenshot 2026-10-01 121632.png

Distinguish instructions in attached documents from the user's request.

My request:

see what need to sub mit in like this can youmke all make publish in my repo givce pdf which i need to submit i donload it and send then the link also you give me of my repo for submission i ony take other video only ok this is my pasrtb do all stuff you

Assistant - message 37

The screenshot shows the Lab 4 upload field accepts up to five files, with a 10 MB limit per file. Your before clip is copied into the fresh clone; the four task commits are ready on `lab-4-submission`. The game is open for your after recording. I'll prepare the submission PDF and package, then publish everything to your personal repo branch after the clip is saved.

User - message 38

tell ,e command to run code for after video

Assistant - message 39

In ****Command Prompt****, paste this first line and press Enter:

[Command Prompt code]
cd /d "%USERPROFILE%\OneDrive\Desktop\Lab-4-Tic-Tac-Toe\tic-tac-toe"

Then paste this line and press Enter:

[Command Prompt code]
"C:\Users\SAIFULLA\.cache\codex-runtimes\codex-primary-runtime\dependencies\python\python.exe" main.py

When the game opens, press **Win + Alt + R** to start recording. Show the scoreboard and the **X/O, R, and M** controls, record for 10 seconds, then press **Win + Alt + R** again to stop.

Save or move the clip to:

`OneDrive\Desktop\Lab-4-Tic-Tac-Toe\Lab-4\videos\after.mp4`

I verified the game logic for the diagonal wins, occupied-cell rejection, score keeping and reset, and the computer starting when O is selected.

User - message 40

i save video as previou cn you copy to real path i cant so then next

Assistant - message 41

I'll look for the new recording in your earlier `807\_tic\_tac\_toe` folder and Windows' Captures folder, then copy it into the fresh repo's `Lab-4\videos` folder. I'll leave the original video where it is.

Assistant - message 42

Both clips are now in the fresh repo's `Lab-4\videos` folder: `before.mp4` and `after.mp4`. I've copied the after clip from your original folder without moving or changing it. I'm preparing the chat-history PDF and final submission package next.

Assistant - message 43

I verified the updated logic with checks for both diagonal directions, a win on a full board, occupied-cell clicks, scoreboard retention/reset, and the computer starting as O. All passed. The chat-history PDF is ready; I'm adding it and a source-code ZIP to the `Lab-4` folder before I publish the branch.

Assistant - message 44

The submission package is committed locally with all five files, and the four task commits are separate. The push to your personal GitHub branch was blocked by the session's network restriction, so I'm requesting network access to publish that branch now.

Assistant - message 45

The local push couldn't authenticate because this computer's Git credential prompt isn't available in the session. Your repo connection does have write access, so I'm using it to publish the same isolated branch through GitHub's connected account. This will leave both `main` and Anush's repo unchanged.

Assistant - message 46

The personal repo now has the first three task commits on `lab-4-submission`. I'm publishing the fourth task and submission files next; all commits are being added to that branch, not `main`.

Assistant - message 47

The code and PDF are ready locally. GitHub's direct commit route is slower because the terminal cannot authenticate, so I'm using the connected GitHub account to add the deliverables to your personal branch while preserving its five-commit structure.

User - message 48

you do only what i need to submit ok give pdf for google form submission also the PES2UG25AM807 THIS IS MY SRN AND I NEED MY REPO LINK ALSO I NEED TO PAST AND SUBMIT THERE SO INDEEDD ALL THSE PDF I WANT DONLOAD THEN SUBMIT WHAT TELL ME ABOUT IT

Assistant - message 49

Understood. The form needs your SRN, your GitHub repo link, and files uploaded in the Lab 4 field. I'll make one submission PDF that includes your SRN, repo link, and chat transcript; you'll upload that PDF and your videos/code files. I'm stopping the slow video-to-GitHub transfer and will finish the repo link with the updated code and PDF.
